### ***Using Evidence in Practice: Lessons Learned***

#### **BIO**

Erna Snelgrove-Clarke is Vice-Dean (Health Sciences) and Director, School of Nursing, Queen's University. She received her Bachelor of Nursing from Memorial University of Newfoundland, her Masters of Nursing from Dalhousie University in Halifax, and her PhD (Nursing) from McGill University in Montreal.

Dr. Snelgrove-Clarke has worked as a maternity nurse for 34 years and has over 20 years of research experience in various aspects of health care and knowledge translation.

Professor Snelgrove-Clarke's program of research focuses on the identification of successful strategies for translating research evidence into maternal and women's health care. More specifically, this translation involves changing provider behaviour to use best evidence, thereby enhancing patient outcomes. Dr. Snelgrove-Clarke is exploring the transfer of knowledge through multiple methods, concentrating on the relationships of health care professionals, organizations, and decision-maker. She is interested in these various networks and their effects on Health Care Professionals uptake and use of research in their daily practice.
